DETAILED ACTION

1. Claims 1-11 are now pending, wherein claims 1-2 and 6-11 are drawn to a fluoropolymer and claims 3-5 are drawn to an article.

Claim Rejections - 35 USC § 102

2. **The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:**

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by E.I. Du Pont De Nemours and Company (GB 1,072,615).

The present invention relates to a **fluorocopolymer** comprising

(a)	polymerized unit based on tetrafluoroethylene and/or chlorotrifluoroethylene
(b)	polymerized unit based on a fluorinated monomer (excluding tetrafluoroethylene and chlorotrifluoroethylene)
(c)	polymerized units based on at least one member [itaconic acid, itaconic anhydride, citraconic acid, citraconic anhydride]
wherein (a) = 50-99.8 mol %; (b) = 0.1 - 49.99 mol %; (c) = 0.01-5 mol %, based on (a)+(b)+(c)	
a volume flow rate = 0.1-1,000 mm ³ /sec	

(summary of claim 1)

E.I. Du Pont De Nemours and Company (Du Pont) disclose a moldable organic composition consisting essentially of (1) 60-80% by volume of a thermoplastic organic polymer of a monomer mixture consisting essentially of (a) 10-95 wt% of one or more ethylenically unsaturated fluorocarbon monomers and (b) 90-5 wt% of one or more ethylenically unsaturated hydrocarbon monomer having less than nine carbon atoms and (2) 20-40 % by volume of inorganic particulate solids, wherein the fluorocarbon monomer is preferred to be a mixture of **tetrafluoroethylene** / vinylidene fluoride or **tetrafluoroethylene** / **chlorotrifluoroethylene** / vinylidene fluoride; the ethylenically unsaturated hydrocarbon monomer can be ethylene (page 2, lines 6-35 and lines 56-59; claim 1). Du Pont further discloses the composition optionally comprises an acidic monomer which can be itaconic acid (page 2, lines 60-65; lines 66-69; and lines 110-111). Du Pont furthermore disclose that the composition has a flow rate of less than about 100 at 295°C/2160g (page 3, lines 80-90). Thus, the present claims are anticipated by the disclosure of Du Pont.
